Attack Entry Surface
Untrusted Content
emails, documents, webpages...
A1
retrieval or tool access
Untrusted Tool / Retrieval Returns
returned snippets and structured fields
A2
Agent Loop (Live Run)
LLM Planner
selects next tool call or response
state read
N1
Context State
history, tool outputs, memory
N2
N4
state update
Tool Interface
invokes tools and records results
N3
Tool-return Boundary
after incorporating a tool response, before the next action
N5
authorization / effect gate for state-changing operations
X2
X1
AgentSentry
Defense and Recovery
Safe Continuation Policy-Compliant
repair action; enforce effect gate
D3
Context Purification
strip instructions; retain task evidence
D2
Counterfactual Shadow Runs
re-execute at each tool-return boundary
D1
Temporal Takeover Localization
locate mediator-driven takeover
Attack path (attacker-controlled)
Normal execution (live-run path)
Defense path (mitigation)
Shadow analysis (diagnostic)
Step number (flow order)
